

# SENIOR SYSTEMS DEVELOPER

## Company Overview

Roku Management Consulting (RMC) is a premier consulting and general contracting firm specializing in personnel, professional, and information technology services. Founded by a service-disabled veteran with a mission to create opportunities and provide exceptional customer service, RMC has rapidly grown, securing several federal contracts within three years.

## Job description

Functional expert providing skills as a SharePoint Software Developer applying current graphics design and .NET technologies to develop, modify, maintain SharePoint server portals. Design, develop, and manage site content and capabilities and provide daily onsite maintenance of the existing Microsoft Office SharePoint Server (MOSS) portals. Manages the content hosted on SharePoint and helps expedite user adoption within the organization. Responsible for maintaining and securing the platform and monitoring system usage to optimize performance. Other basic tasks include: Creating and configuring new sites.

1. Verify accuracy of data and maintenance and support for the data warehouse.
2. Create and oversee jobs for daily, weekly, and monthly backups.
3. Perform data migrations between storage frames for existing customers.
4. Create and maintain complete documentation as it relates to installation and status of software.
5. Provide system integration and security plans and implementation.
6. Formulate and define specifications for applications or modify/maintain existing applications.
7. Provide ongoing technical assistance to customers (primarily internal) regarding applications and participate in upgrades and system enhancement projects.
8. Design and develop prototype software using the latest open-source technologies.
9. Implement disaster recovery procedures and ensure that the system meets high availability standards.
10. Work with senior team members to identify errors and/or deficiencies in specifications and to make required modifications or enhancements.
11. Create test plans and perform regression testing and white box testing as modules are integrated into the end systems.
12. Collaborate on the design of data models, technical architecture, data flows, schemas and API contracts.
13. Provide technical support activities for a production processing environment.
