

# Applications Programmer I

## Company Overview

Roku Management Consulting (RMC) is a premier consulting and general contracting firm specializing in personnel, professional, and information technology services. Founded by a service-disabled veteran with a mission to create opportunities and provide exceptional customer service, RMC has rapidly grown, securing several federal contracts within three years.

## Job description

Assist in development or analysis of large scale software projects, usually involving scientific applications. Assist in preparing software requirements, design, code, or documentation. Assist in developing plans for detailed analysis of computer program code, documentation, and output to insure validity, consistency, and conformance to applicable standards. Design and execute computer program test cases, analyze output for validity, and prepare written reports documenting results. Supervise, train and evaluate junior level personnel. Direct on-site customer interface for software installation, testing, systems integration, programming, debugging and other computer system tasks as needed. Provide informal training in implementing software programs based on user requirements. Maintain liaison with outside hardware and software vendors for system upgrades and maintenance. Develop, write, and submit technical reports for technical presentations and meetings. Perform evaluations in the development, design, implementation, and maintenance of complex programs or systems.

1. Assist in leading the creation, review, and submittal of technical support documentation updates.
2. Assist in the training of customers on systems applications.
3. Manage the development team and conduct regular one-on-one meetings.
4. Create data extracts and reports from system based on requirements.
5. Develop and implement enhancements, revisions to meet the needs of the client.
6. Handle project and task management and reporting as necessary.
7. Update and research recommendations for product and system improvements.
8. Responsible for the quality of work that the team members perform.
9. Adhere and contribute to development policies, procedures, and standards.
10. Solve or recommend solutions for complex issues and problems
11. Make presentations to management, clients, and peer groups as requested.
12. Ability to instruct and guide less senior software developers/analysts.
13. Develop program logic for new applications or analyze and modifies logic in existing applications.
14. Engage with business/stakeholder as required to refine/clarify business requirements and feedback.
15. Write code, complete programming and perform testing and debugging of applications.

16. Interact with the user community to solve problems, augment the system functionality, and improve the user interface.
17. Estimate to high level business requirements and provide options analysis.
18. Ensure that resolved incidents are properly documented and closed.
